# Welcome

The Organizing Committee for the 24<sup>th</sup> International Farm Management Congress (IFMA24) welcomes you to sunny Saskatoon, Saskatchewan! It has been nearly 10 years since the congress was held in Canada (Quebec in 2015) and ~30 years since the congress was held in western Canada, so we are delighted to have been given the opportunity to host the event in 2024.

Like the congresses before us, we want this week to serve as a forum to exchange ideas, experience and knowledge through presentations and demonstrations. Delegates attending this year come from 20 countries around the globe. Our collective diversity in backgrounds and experiences allows for enlightening discussion on the intersections of agricultural production, agricultural policy, agribusiness, economics, and farm management.

The chosen theme for the Congress is **'Resilience Through Innovation'**. Agriculture faces a multitude of production and business risks; adaptation and innovation are key for farmers/ranchers/growers and agribusiness to remain resilient and profitable.

We are delighted to have 47 contributed papers for oral presentation, three organized sessions and eight posters' presenters sharing their research findings and perspectives.

The field trips on Tuesday and Thursday will give you a glimpse of our agricultural research and production systems, as well as our culture and history.

Throughout this week we encourage you to make new connections and learn what other farm management professionals are doing around the world.

Lastly, I want to recognize the local organizing committee, volunteers, invited presenters, tour stop hosts and sponsors (both cash and in-kind) for making the 24<sup>th</sup> Congress a reality.

Thank you for joining us at IFMA24!

*Eric Micheels*

IFMA24 Congress Chair

# Minister's Message

On behalf of the Government of Saskatchewan, welcome to the International Farm Management Association's Congress.

In Saskatchewan, the agriculture industry is foundational to our province's growing economy. We are excited to share what our producers and agri-businesses have to offer. From high quality crops and animal products to new and innovative technologies, Saskatchewan agriculture is open for businesses, whether you're down the road or across the globe.

Markets across the world recognize Saskatchewan as a great place to do business. which is why in 2023, our agri-food exports exceeded \$20 billion dollars.

To meet and exceed that economic growth, it is important to collaborate with leaders in the farm management industry like yourselves, for you see what works, you make connections between individual producers, suppliers, agribusinesses and others.

This year's congress theme, Resilience Through Innovation, resonates with our agricultural sector and those who work within it. To maintain and grow agricultural economies, it is vital that industries always look ahead, what can be done better, how can we grow, especially in challenging times.

The province's continued emphasis on innovation in the agriculture sector is essential for adapting to a changing global climate and we invest more than \$37 million annually in agriculture research.

This research proves our science-based, sustainable practices are working. Research proves that Saskatchewan producers grow the most sustainable crops in the world, with a track record of maintaining healthy soils, sequestering carbon and minimizing emissions by adopting innovative technology, implementing zero and minimum tillage, diversifying crop rotations, converting annual cropland to perennial cover and investing in research. Our livestock are also key to carbon sequestration while grazing over 20 million acres of native grasslands and tame forages.

Saskatchewan is a great place to have this conference and I hope your time here is fruitful and you take advantage of everything this event has to offer.

We hope to see you again soon,

David Marit,  
Saskatchewan Minister of Agriculture
